Establishing a lush, green carpet of turf seems easy - just roll out the sod and be done with it! However, establishing turf from seed is often fraught with problems that can lead to seeding failures. Even under optimal conditions, seeds can face stiff competition from weeds, diseases, and sudden changes in climate that can wreak havoc on the success of the operation. How can contractors ensure that seedings are successful? What steps must be taken to ensure the best possibility of success? How should soil be prepared to give good seeding results? These and other questions will be addressed along with the opportunity to discuss causes and solutions to seeding problems.

"Turf Establishment Basics – Not as easy as it seems"

Prof. Bruce Branham

Establishing a lush, green carpet of turf seems easy - just roll out the sod and be done with it! However, establishing turf from seed is often fraught with problems that can lead to seeding failures. Even under optimal conditions, seeds can face stiff competition from weeds, diseases, and sudden changes in climate that can wreak havoc on the success of the operation. How can contractors ensure that seedings are successful? What steps must be taken to ensure the best possibility of success? How should soil be prepared to give good seeding results? These and other questions will be addressed along with the opportunity to discuss causes and solutions to seeding problems.
